WORK EXPERIENCE

Tech Agent, Stockholm – *Software Developer*

March 2024 – NOW

As a software development consultant at Tech Agent I provide tailored solutions for clients, utilizing a diverse set of languages and frameworks. Project management and client communication are key parts of my role.

Luday, Gothenburg – *Full Stack Developer intern*

January 2024 - March 2024

As a full stack intern at Luday I took part in designing, developing and deploying web apps in an agile scrum team, mainly working with JavaScript & Python frameworks.

Ahlberg Dollarstore, Uppsala – *Store employee*

June 2021 - June 2023

At Dollarstore I worked full-time as a store employee, handling cashier duties, managing inventory and providing top-tier customer service.

EDUCATION

Code Institute, Dublin – *Diploma in Full Stack Development*

November 2023 - Specialization Predictive Analytics

Verification link

Thorén Business School, Uppsala – *Vocational degree*

June 2022 - Commerce program

PROFESSIONAL PROJECTS

SmartaBilval – *Car evaluation service*

ArvidBil – *Informational site for car company*

Sokonekt – *Social media management SaaS*

Ebiore – *Social networking app*

FURTHER SKILLS

Basic Linux

Basic UI/UX design with Figma & PhotoShop

Agile methodologies

Git & GitHub

Google Cloud Platform (GCP)

Docker

Automated testing

MERITS & CERTIFICATIONS

Foundational C# - Microsoft

CI Hackathon Participation

My LeetCode Solutions

PERSONAL PROJECTS

Elvius.se - Live

Project Hub - GitHub

Binary Classification with CNN's - GitHub

LinusElvius.se - Live

Witches Brew - GitHub

Projects

Professional

SmartaBilval - [Live Link](#)

For SmartaBilval, I improved and modified the car evaluation service based on client needs, using JavaScript frameworks and WordPress. My role included enhancing functionalities, fixing bugs and ensuring alignment with project goals through close collaboration with the client.

ArvidBil - [Live Link](#)

For ArvidBil, my role involved making improvements and fixing issues on an informational WordPress website in order to improve the overall user experience.

Sokonekt

At Sokonekt, I was part of an Agile Scrum team that developed a social media management SaaS platform. Utilizing Python and JavaScript frameworks, I primarily focused on backend and frontend development tasks. My responsibilities included feature implementation and occasional contributions to design tasks using Figma.

Ebiore

At Ebiore, I played a key role in developing a social app for families as part of an Agile Scrum team. Utilizing JavaScript and Python frameworks, I contributed to both frontend and backend development tasks, ensuring seamless integration and functionality.

Personal

Elvius.se - [Live Link](#)

- Complete E-Commerce web app & informational site
- Developed in NextJS with a Flask backend
- Utilizes Google Compute Engine for hosting the backend, and Vercel for the frontend
- Full CRUD via admin page, Auth, multiple external API's

Project Hub - [GitHub Link](#)

- Social platform for developers looking to share their work
- Developed in Django with Jinja HTML templating, vanilla CSS & JavaScript
- Full CRUD, Auth, utilizes multiple external API's
- Hosted using Heroku (No longer live)

Binary Classification with CNN's - [GitHub Link](#)

- Machine Learning project for binary classification using convolutional neural networks (CNN)
- Developed using TensorFlow, Scikit-learn & Streamlit for web app
- Hosted using Heroku (No longer live)

LinusElvius.se - [Live Link](#)

- Developed using React, hosted with GitHub pages

Witches Brew - [GitHub Link](#)

- Team project as part of a Code Institute Hackathon
- Developed using vanilla HTML, CSS & JavaScript, hosted using GitHub pages
